

2018/19 Earthworks – Bringing in the Big Kit

This month will see the project site gearing up for our biggest earthworks season yet. Next season the project has up to four million cubic meters of earth to move, the equivalent of 2,909 Olympic sized swimming pools.

This will require around four times the amount of work compared to last season, and to do this we will be bringing in the big kit. That means there will be larger pieces of plant moving more earth, and a lot more equipment to support these operations. It also means there will be a significant increase in materials being delivered across the site.

We will be employing more people to support our highly skilled and capable team. If you are interested in being part of the team and taking on the challenge of next season, please visit the project website for current employment opportunities www.nx2group.com.

This is going to be a big season where we will move the bulk of the earth required and the shape of the road will become clearer. You will see us working across the length of the job and activity will build up as the season progresses. In some areas, we will be concentrating on bulk earthworks and in other areas, more ground improvements and some settling.

We understand that you will want to see what's happening and look at the big pieces of plant, but we ask you to please keep your eyes on the road. We will continue to keep you updated and show you all the cool stuff happening on site.

If you want to know what is going on, on the project, there are many places to see and hear what is happening. We regularly provide updates on our Project website, bi-monthly newsletter, Facebook, Mahurangi Matters, community network meetings and at presentations to local groups and schools.

It's a very exciting time for the project and we are looking forward to getting on with what we are here to do – deliver a world class motorway by late 2021.

Ngā mihi

Robert
